

COURT NO. 1, ARMED FORCES TRIBUNAL  
PRINCIPAL BENCH, NEW DELHI

N.

OA 344/2023

Gp Capt Gurmail Singh (Retd)

... Applicant

Versus

Union of India & Ors.

... Respondents

For Applicant

:

Mr. SS Pandey, Advocate

For Respondents

:

Gp Capt Karan Singh Bhati, Sr CGSC

CORAM :

HON'BLE MR. JUSTICE RAJENDRA MENON, CHAIRPERSON

HON'BLE LT GEN C. P. MOHANTY, MEMBER (A)

ORDER  
03.11.2023

Vide our orders of even date, we have dismissed the application. Faced with the situation, learned counsel for the applicant makes an oral prayer for grant of leave to appeal under Section 31 of the Armed Forces Tribunal Act, 2007 to the Hon'ble Supreme Court. We find no question of law much less any question of law of general public importance involved in the matter to grant leave to appeal. Hence, the prayer for grant of leave to appeal is declined.

[RAJENDRA MENON]  
CHAIRPERSON

**ORDER**

**MA 3239/2023**

Counter affidavit has been filed. There being some delay in filing the counter affidavit, this application has been filed seeking condonation of delay. Delay condoned. Counter affidavit is taken on record.

2. MA stands disposed of.

**OA 344/2023**

3. Invoking Section 14 of Armed Forces Tribunal Act, 2007, the instant OA has been filed praying for grant of disability pension to the applicant for disabilities assessed @45.67% rounded off to 50%.

**OA 344/2023**  
**Gp Capt Gurmail Singh (Retd) Vs UoI & Ors.**

4. The factual matrix of the case is that the applicant was commissioned in the Indian Air Force on 11.06.1988 and retired on 31.08.2019. During the Release Medical Board conducted prior to his retirement, he was found to be suffering from disabilities (i) NAFLD (Old) @1-5% (ii) Primary Hypertension @30% (iii) Obesity @ 1-5% (iv) Ocular Hypertension @ 11-14% for life and his medial category was permanently downgraded to A4G4(P), while his disabilities were held to be Not Attributable Nor Aggravated (NANA).

5. The initial claim of the applicant for the disability pension was rejected by the Competent Authority and the same was conveyed to the applicant vide Dte letter No. AirHQ/99797/4281/Dis/O/DAV-1 (B) dated 07.08.2019. Aggrieved by the aforesaid rejection, the applicant has filed this OA.

6. Ld. Counsel for the Applicant stresses that the disabilities were detected starting from November, 2011 after more than 22 years of Air Force service due to continuous service stress, and strain of Air Force service, dietary compulsion of service and being posted to different field areas including High Altitude Area and lack to time for proper rest, exercise and walking wherein the causal connection of the disability is clearly established with the Air Force

service.

7. Placing reliance on the judgement of the Hon'ble Supreme Court in ***Dharamvir Singh v. UOI & Ors [2013 (7) SCC 36]***, Learned Counsel for applicant argues that no note of any disability was recorded in the service documents of the applicant at the time of the entry into the service, and that he served in the Air Force at various places in different environmental and service conditions in his prolonged service, thereby, any disability at the time of his service is deemed to be attributable to or aggravated by military service.

8. Ld. Counsel argues that the fact that the applicant was obese has no implication whatsoever on the onset of disabilities, and that the weight is a factor which keeps on fluctuating with time, and it can increase or decrease with time, therefore, not having any implication anyhow on the disability of hypertension.

9. Per Contra, Learned Counsel for the Respondents submits that under the provisions of Rule 153 of the Pension Regulations for the Indian Air Force, 1961 (Part-I), the primary condition for the grant of disability pension is invalidation out of service on account of a disability which is attributable to or aggravated by Air Force

service and is assessed @ 20% or more.

10. Relying on the aforesaid provision, Learned Counsel for respondents further submits that the aforesaid disabilities of the applicant were assessed as "neither attributable to nor aggravated" by Air Force service and not connected with the Air Force service and as such, his claim was rejected; thus, the applicant is not entitled for grant of disability pension due to policy constraints.

11. Ld. Counsel further argues that the weight of the applicant was 78 kgs in 1998, and that gradually gained weight and by the time of onset of the disability, applicant was overweight by around 21.5 kgs, purely due to dietary indiscretion, lack of exercise and a sedentary lifestyle, and his own lack of health consciousness, hence, the disabilities can not be held attributable to or aggravated by service as he is solely responsible for his unreasonable weight gain in violation of the service requirements of maintaining physical fitness at all times.

12. On the careful perusal of the materials available on record and also the submissions made on behalf of the parties, we are of the opinion that it is not in dispute that the extent of disabilities (i), (iii) & (iv) were assessed to be less than 20% which is the bare

minimum for grant of disability pension in terms of Regulation 153 of the Pension Regulations for the Indian Air Force, 1961 (Part-I), therefore, not warranting our interference. Now, the only question that arises in the above backdrop is whether the second disability - Primary Hypertension suffered by the applicant was attributable to or aggravated by military service.

13. We find that the applicant is constantly overweight ranging between 21.5 to 36 kgs in the period from 07.10.2014 to 27.05.2017 with his actual weight ranging between 88.5 -103 Kgs as against the Ideal weight of 67 Kgs. We have further analysed the subsequent Re-categorisation Medical Boards and we find the same trend, with the applicant not reducing the weight even after slew of directions advised by the medical experts including brisk walking, jogging and reducing the weight. However, we observe that the weight has not been reduced, thereby, clearly showcasing that onset of disability is the result of the applicant being alarmingly overweight, and therefore, the argument that the applicant suffered the disability due to stress and strain of the service is wholly unfounded on the simple reasoning that the organisation cannot be held liable for the own actions of the applicant.

14. We cannot shy away from the fact, that the disability - PHT is due to interplay of metabolic and lifestyle factors and failure in maintaining the ideal body weight which can be managed by regular exercise and restricting diet, and the fact that the applicant is alarmingly overweight signifies that the applicant has remained obese over a period of time, thereby, himself inviting the disability, and in such a case, it would be grossly unjustified for us to ignore the aforesaid facts.

15. Before concluding, it is relevant to point out that the association of obesity and hypertension has been recognized since the beginning of the twentieth century when blood pressure was first measured in populations, and this relationship between body weight and blood pressure was demonstrated prospectively in several studies in the 1960s. Appreciation of the clinical significance of obesity-related hypertension has grown substantially over this same time period, to the point where obesity is recognized as a major cause of high blood pressure, and the combination of obesity and hypertension is recognized as a preeminent cause of cardiovascular risk.

16. Epidemiological data unequivocally support the link between body weight and blood pressure, thus indicating greater body

weight as one of the major risk factors for high blood pressure. Likewise, higher BMI is also associated with increased risk for development of hypertension over time. Hypertension is a complex phenotype that arises from numerous genetic, behavioral and even social origins, and obesity is one of the most prevalent risk factors for its development.

17. Regardless of its etiology, however, hypertension is a highly prevalent and highly significant risk factor for the development of all manifestations of cardiovascular disease, including coronary heart disease, stroke, heart failure, aortic and peripheral arterial disease, and valvular heart disease.

18. The importance of lifestyle management in the treatment of patients with obesity-related hypertension cannot be misunderstood. Adoption of a healthy lifestyle facilitates weight loss, increases responsiveness to antihypertensive medications and produces independent beneficial effects on cardiovascular risk factors.

19. Applying the above parameters to the case at hand, we are of the view with respect to disability - PHT, there is no denial from the fact that if the claimant is himself not responsible enough to control the factors which are well within his voluntary control, he cannot be allowed to garner benefit of such beneficial schemes and

provisions.

20. Therefore, in view of our analysis, the OA is liable to be dismissed.

21. Consequently, the O.A. 344/2023 is dismissed.

22. No order as to costs.

23. Pending miscellaneous application, if any, stands closed.

Pronounced in the open Court on 3 day of November, 2023.
